

CEO Alexander König holds keynote speech at Start Summit 2017 in St. Gallen

(29.03.2017)

In 2016 Reactive Robotics participated in the START Summiteer competition at START Summit and ranked in the top 3 out of 80 participants. This enabled the company to raise money for a series A investment round.

This year, the CEO was back at START Summit for holding a keynote speech at the plenum, presenting the company's passion and daily business: developing intelligent robotics in medical technology and thus, enabling very early mobilization of intensive care unit patients. In his speech, Alexander explained advantages of bringing the therapy to ICU patients instead of bringing the patient to the therapy.

The Start Summit (www.startsummit.ch) is Europe's leading student-run conference for entrepreneurship and technology. More than 1500 young and innovative minds yearly find their way to St. Gallen.
