

CEO Alexander König talks at Cyber Dialog 2017 about „Work 4.0, Artificial Intelligence and Robotics – How are we going to work tomorrow“

(29.06.2017)

This year's Cyber Dialog took place at the Marriot Hotel in Munich and discussed the topic:

- “IT-security in modern industrial and high-technology states. Arranged change or administrated chaos? Secure transformation in state, economy and society.”

Alex talked about changes on the labour market created by ROBOTICS technology. The participants in Alex' workshop were: Professor Sami Haddadin, CEO of Franka Emika GmbH, Michael Kranawetter, Head of Information Security, Microsoft Deutschland GmbH and Christoph Raab, Chairman, European Security Round Table.

Amongst others they draw the following conclusions:

- Creating visions will be essential part for a productive 4.0 working environment
- Data protection will undergo a transformation from obstacle to distinctive feature
- Companies should be transparent about their strategies to take away existing fears
- ROBOTIC will be key to support the demographical challenges in the healthcare sector - assisting people – patients and care takers - with intelligent, adaptive technology
- Munich has the potential to become the world leading ROBOTIC competence centre
